SQ

— Tapë Përforcuese —

Përdoret për përforcim-ankerim stabil të të gjithë aksesoreve që vendosen në fasadë me stiropor dhe stiroduer.

Mënyra e përdorimit: Paraprakisht shpohet vrima në stiropor/stiroduer i cili është i përforcuar në mur. Shpuarja bëhet me frezë nga materiali PVC, pastaj vendoset tapa, mbi të vendosen rrjeta e fasadës, llaqi, fasada.

E certifikuar me standarde Europiane.

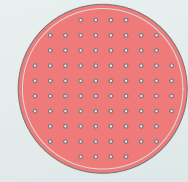

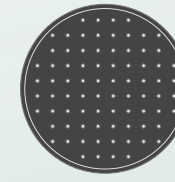

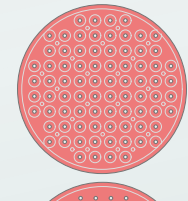

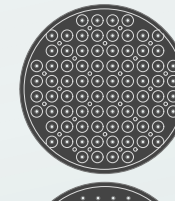

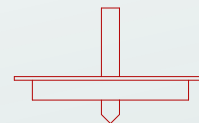

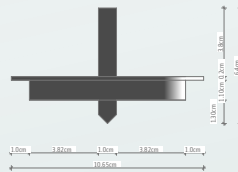

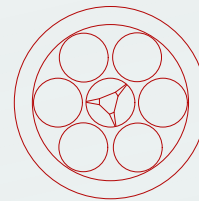

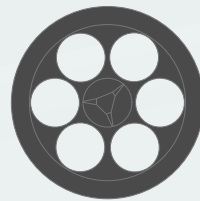

DE

— Bohren von Polystyrol —

Wird zur Verstärkung – stabilen Verankerung aller Zubehörteile benutzt, die bei Styropor- und Styrodurfassaden eingesetzt werden.

Gebrauchsanleitung: Vorab wird ein Loch in den Styropor/Styrodur, der schon an der Wand befestigt wurde, gebohrt. Das Bohren geschieht durch eine Fräsmaschine mit PVC-Material, danach wird der Korken angebracht. Über diesen Korken werden das Netz der Fassade, der Putz und die Fassade angebracht.

Nach europäischem Standard zertifiziert.

EN

— Polystyrene Drillier —

Used for the reinforcement - stable anchoring of all accessories, which are used in styrofoam and styrofoam. Instructions for use: A hole is drilled in the Styrofoam / Styrodur, which has already been attached to the wall. Drilling is carried out by a milling machine with PVC material, after which the cork is attached. The net of the façade, the plaster and the façade are attached to this cork.

Certified to European standards.
